

HUGO SERENO FERREIRA, PHD

BIRTH 7/1980

E HUGO.SERENO@FE.UP.PT

T 220301567

Professor (7yrs) at FEUP, researcher (7yrs) and entrepreneur (3yrs) with 14+ years of professional experience, 25+ published works (*h-index* 7, *i10-index* 6), and 20+ MSc supervisions, focused in high-quality, adaptable, large-scale, *big-data* software solutions. His career encompasses projects for the portuguese and international military, local government and privately held businesses. Nowadays he focus on Object-Functional Programming, Architecture & Design Patterns, and Machine Learning. First student to be jointly awarded a Ph.D. (with *distinction*) in *Computer Science* by the Universities of Porto (UP), Minho (UM) and Aveiro (UA), he later held a *postdoc* research position at INESC TEC (1.5yrs) on *Large Scale Software Systems for Ambient Assisted Living*.

After receiving a *LicEng* degree in *Informatics and Computation Engineering*, he performed military R&D for NATO at *ParadigmaXis*, S.A. There he progressively assumed the roles of developer, team leader, software architect, and project manager in several government and privately held projects. His university teaching career started shortly after becoming a doctorate candidate in *meta-programming* and *model-driven software engineering* (2007), mainly at the Faculty of Engineering of the University of Porto (FEUP).

Early 2011 he co-founded *Shiftforward*, an international strategy and technology consultancy company specialised in *big-data* software solutions for the *Online Advertising* industry. In 2014, after raising 1.2M\$ in a seed VC funding round from Portugal Ventures and industry veterans and private investors, Brian Fitzpatrick and Florian Heinemann, *Shiftforward*'s business model evolved into a *framework-as-a-service*, lead by its two flag products, the *AdStax* and the *AdForecaster*, a state-of-the-art forecasting engine, able to predict the performance of multiple campaigns with arbitrary segments and targeting rules, in systems with billions (10^{12}) of impressions, and simulate alternative "*what-if*" scenarios in few seconds.
